Full - updated version,
part1 is here, part2 and patches are in next/prev post!

Some fixes/addedCode:

- +prj/ses: updated - gcc/watcom(v2)/msvc/cmake+ninja samples added! maybe uncheck 1stOpt in config for this
- +bugFixes and clearing of .tool files - 'ut-default-tools.tool' has more or less all the info
- +plugins: added IsModified and sample code for it(SUGCPluginNativeModify) - can be compiled with regularCompile.all
- +dirs with spaces may now work - this was more or less cmd /c quoting misunderstanding

File note.txt has more info(mayAlsoBeOpenedVia:F1(orMainMenu)->note(Shift-inEditMode)).

InEditor :> (whenWaitingForOutput) is buggy
and going fullscreen(with plugins) is buggy because underlying windows are destroyed
Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completely afresh, don't just override previous version!
