Full - updated version,

part1 is here, part2 and patches are in next/prev post!

Some fixes/addedCode:

- +prj/ses: updated gcc/watcom(v2)/msvc/cmake+ninja samples added! maybe uncheck 1stOpt in config for this
- +bugFixes and clearing of .tool files 'ut-default-tools.tool' has more or less all the info
- +plugins: added IsModified and sample code for it(SUGCPluginNativeModify) can be compiled with regularCompile.all
- +dirs with spaces may now work this was more or less cmd /c quoting misunderstanding File note.txt has more info(mayAlsoBeOpenedVia:F1(orMainMenu)->note(Shift-inEditMode)).

InEditor :> (whenWaitingForOutput) is buggy

and going fulscreen(with plugins) is buggy because underlying windows are destroyed Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completelly afresh, don't just override previous version!
