Subject: Formatting text with percent sign

Hi,

Feel like a newbie again... How do I use Format to include a percent sign in text like I did with *printf functions:

*printf("Percentage: %.1f %%",15.5);

Results in: "Percentage: 15.5 %"

This does not work:

Format("Percentage: %.1f %%",15.5);

Results in: "Percentage: 15.5 "

Obviously I wish to format special strings with percentage signs in various places, so just having it follow a value is not sufficient.

Best regards,

Tom
