Quote:Quote:And I would appreciate documentation where functions and defines are in alphabetical order .

Is not full-text search better?

I even plan to connect it to some hotkey (like you press e.g. Alt+F1 on "RectTracker" and TheIDE shows all topics with "RectTracker" contained).

Mirek

Not with me:

1.

I don't believe in the paperless office. In many cases simple paper is the handiest.

2.

Full text search would be great - if it worked ...

Take for example "WhenAction":

a) I click on "Help Topics".

b) The tree opens up and shows among other things "Ctrl".

c) I start scrolling and looking for "WhenAction".

d) I'm still scrolling and looking .

e) Same as d)

f) I fail to see it .

Or - one of my favorite questions - am I doing it wrong?

Werner
