Hello,

I would like to announce that now it is possible to break the execution of the application in any time with GDB. It allows you to set breakpoints whenever you want. The improvement works on all supported platforms Windows & POSIX. Currently, we are still working on live breakpointing with GDB.

Here is the screen-shot of improved GDB menu inside IDE:

Moreover, TheIDE now shows maximally 200 entries of the stack to avoid TheIDE not responding problem. The following problem occurred when recursion crashed the application.

Sincerely,
Klugier
