Hello Koldo,

I just tested latest U++ on Windows and I am unable to reproduce your problem. Please make sure you have selected "Standard" GDB mode in your settings:

Currently, I am aware that GDB_MI2 doesn't work correctly in simple scenario. For me there is not need to keep two different GDB implementations. We should focus on only one and polish it. Some time ago I asked Massimo for deletion, but he didn't answer me, yet.

I have another question - what is your version of TheIDE?

Sincerely,
Klugier
