Subject: Folder for configuration file
Posted by forlano on Sun, 26 Aug 2018 10:07:45 GMT

Hello,

this post is connected with my previous post regarding UAC issue on windows 10 (https://www.ultimatepp.org/forums/index.php?t=msg&th=104 10&start=0&).

It seems that the UAC problem on windows 10 appears because I read/save the configuration file of my app on the user's home that I retrieve with:

   GetHomeDirectory()

In fact, if my application tried to read/save the configuration file inside the installation folder no UAC message appears (although the file file was not saved).
I have two questions:

1. which is the best folder to read/save the configuration file and to avoid complain from W10? (I install the program via a NSIS script for all users with admin privilege).

2. Do we have a UPP method to read and save cfg file inside
C:\Users\{username}\AppData\Local\MyApp\
that seems the standard folder where to save the application file.

Thanks!
Luigi
