Hello everyone,

I added a basic GUI example to the OAuth package.

It demonstrates a basic authentication dialog for Google Drive, using the U++/CEF wrapper, namely Bazaar/ChromiumBrowser.

The authentication dialog can be called within any U++ gui app.

As you can see in the example code, it is very easy to integrate the OAuth2Request class into any type of apps, be it console or gui-based.

Here's a screenshot:

Example: [https://github.com/ismail-yilmaz/upp-components/tree/master/ Examples/OAuth2GUI](https://github.com/ismail-yilmaz/upp-components/tree/master/Examples/OAuth2GUI)

Best regards,
Oblivion
