Hello,

with this code (always the same)

```
VegaMain::VegaMain()
{
    CtrlLayout(*this, VERSION);
    spls.Vert();
    spls.SetPos(8500);
    spls.Vert(tabs, consoleFrame); // <<<<<!!!!!
    SetBars();
    SetTabs();
    Init();
    BackPaint();
    this->WhenClose = THISBACK(Exit); // prevent the closure
}
```

I get the following picture

The splitter split the area in two equal regions. With 608-dev1 and before instead the bottom part (consoleFrame) was only 15% of the total area and this was what I wanted. I'm trying to play with logical coordinate to reduce the consoleFrame area but without success. Any suggestion?

Luigi
