
Subject: Click problems in embedded controls in GTK mode

Hi,

I've an ArrayCtrl with a DropList and a ColorPusher embedded.

In X11 mode all is working perfectly; in GTK mode the embedded controls are NOT responsive.

When I click, sometimes nothing happens, sometimes the DropList open and closes quickly.

The only way to use it is to try many times, keeping mouse button pressed and, when the list is opened, move the cursor **KEEPING THE BUTTON PRESSED** and using the wheel.

Almost the same happens with ColorPusher. Sometimes the control is irresponsive and, when it opens, it closes suddenly releasing the mouse button.

Is there a solution for it ?

Ciao

Massimo
