

Hello Everyone !

Nowaday I tried to send a "Soap Request" via the Object HttpRequest and looking for the result coming from execute Methode.

I have tried this kind of code :

```
#include <Core/Core.h>
using namespace Upp;
CONSOLE_APP_MAIN
{
    String reponse="";
    auto test = new
HttpRequest("http://www.holidaywebservice.com//HolidayService_v2/HolidayService2.asmx?wsdl
");
    test->Timeout(5000);
    test->ContentType("text/xml");
    test->Post("<soapenv:Envelope xmlns:soapenv='http://schemas.xmlsoap.org/soap/envelope/'
xmlns:hs='http://www.holidaywebservice.com/HolidayService_v2/'><soapenv:Body><hs:GetHolid
aysForMonth><hs:year>2018</hs:year><hs:countryCode>UnitedStates</hs:countryCode><hs:m
onth>11</hs:month></hs:GetHolidaysForMonth></soapenv:Body></soapenv:Envelope>");
    reponse = test->Execute();
    LOG(reponse);
}
```

But it crash with the message : "heap leaks detected" and the exitcode 0.
The heap leaks detected seems related to the LOG/"reponse"
so I tried without them and the result is now a crash with the exitcode : 3224225477

Can someone explain me why this occur ?

Sorry for my bad english, Thanks in advance.
