Hello Xemuth,

Because you've created an HttpRequest on the heap and you forgot to delete it at the end. :)
This is the VERY reason you should avoid using new/delete.
Try to allocate resources on the stack, or use containers (e.g. One<> for single instance, Array<> for mulitple instances.)

```
HttpRequest
test("http://www.holidaywebservice.com//HolidayService_v2/HolidayService2.asmx?wsdl");
test.Timeout(5000);
test.ContentType("text/xml");
test.Post("<soapenv:Envelope xmlns:soapenv='http://schemas.xmlsoap.org/soap/envelope/'
xmlns:hs='http://www.holidaywebservice.com/HolidayService_v2/'><soapenv:Body><hs:GetHolid
aysForMonth><hs:year>2018</hs:year><hs:countryCode>UnitedStates</hs:countryCode><hs:m
onth>11</hs:month></hs:GetHolidaysForMonth></soapenv:Body></soapenv:Envelope>");
reponse = test.Execute();
LOG(reponse);
```

Best regards,
Oblivion
