Good morning Mirek,

When i declare the alias T2 for table T1 as an other ID (with SqId or with SQLID macro i have compiling errors. This

```
SqId T2("T1");
SQL & Select(ID.Of(TABLE),COL1.Of(TABLE),COL2.Of(TABLE),COL1.Of(T2),COL2.Of(T2))
.From(TABLE)
.InnerJoin(TABLE).AsTable(T2).On(ID.Of(T2) == FATHER.Of(TABLE));
```

results

error: 'class Upp::SqlSet' has no member named 'On'

and that

```
SqId T2("T1");
SQL & Select(ID.Of(TABLE),COL1.Of(TABLE),COL2.Of(TABLE),COL1.Of(T2),COL2.Of(T2))
.From(TABLE)
.InnerJoin(T2).On(ID.Of(T2) == FATHER.Of(TABLE));
```

results

note: crosses initialization of 'Upp::SqId T2'

Sorry, i probably not understand your explanations :cry:

Best regards.
