Hi Mirek,

Your ideas are right. I have good results with this :

```
SqlId T2("T2");  
SQL &  
Select(ID.Of(TABLE),COL1.Of(TABLE),COL2.Of(TABLE),COL1.Of(T2).As("COL1T2"),COL2.Of(T  
2).As("COL2T2"))  
.From(TABLE)  
.InnerJoin(TABLE.As(T2)).On(ID.Of(T2) == FATHER.Of(TABLE));
```

Thank you very much, Mister Fabulous ;)
