Hi Giorgio,

you can use StdLogSetup() to controle logging.

for example StdLogSetup(LOG\_FILE | LOG\_SYS); in order to send logging to the  
~/.upp/appname/appnam.log file, and to /var/log/appname.log

you can set the logfilepath as second param of StdLogSetup : StdLogSetup(LOG\_FILE ,  
"/home/user/appname.log");
