I'm always using the latest trunk.

My another app doesn't have such problem. In both apps file's charset is set to "Default".

In the TheIDE Setup -> Settings -> Editor -> Default charset is set to UTF8.

The app having problem with menu accelerators doesn't have this problem in Windows and in Linux. I'm distributing it for 7 years ...

The problem is not urgent. My app is free and I'm just reporting a possible bug.

I'll be waiting for NSMenu ...

Thank you for developing UPP and porting it to Mac!
