my guess is that, you have more than one upp installation, and your app is still using the old one.
if your app is in MyApps assembly, please, check your file MyApps.var, verify that the uppsrc is in the new upp version.
here is mine UPP = "C:\\upp/MyApps;C:\\upp/uppsrc";

Note:
instead of TDM-GCC, you can download upp-mingw-11873.7z, that chipped with a preconfigured mingw64 version.
and instead of the stable version, considere using the nightly build, it is also stable, and up to date.
