Hello

i try to use PostgreSQL under Windows in a Skylark application.

I added include postgresql directory and lib PostgreSQL directory containing libpq.lib file in Build method.

I have changed "library(WIN32 !NOPOSTGRES SQL GCC) pq;" to "library(WIN32 !NOPOSTGRES SQL GCC) libpq;" in PostgreSQL.upp because i had the error "cannot find -lpq"

I'm using PostgreSQL 9.6.10 and TheIDE version 11873

Now i have error "undefined reference to 'PQerrorMessage'" and other error message for PQconnectdb, PQstatus...

Can you help me ?

Thank you !
