Hello again, I find au way to fix my issue and loop through XmlNode

```
void loopXml(const XmlNode &xn,int cpt,String baliseToFind,bool Ok){
    XmlNode buffer(xn,cpt);
    for(int i = 0; i < buffer.GetCount(); i++){
        if(buffer.GetText().Find(baliseToFind) > 0 || Ok ){
            //Cout() << buffer.GetText().Find(baliseToFind) <<"\n";
            if(buffer[i].IsText())
                Cout() << buffer[i].GetText() << "\n";
            else
                loopXml(buffer[i],cpt++,baliseToFind,true);
        }
        else
            loopXml(buffer[i],cpt++,baliseToFind,false);
    }
}
```

```
CONSOLE_APP_MAIN
{
    String data;
    String atmTAg;
    std::ifstream fichier(String("myFile").ToStd());
    if(fichier)
    {
        std::string str((std::istreambuf_iterator<char>(fichier),
            std::istreambuf_iterator<char>()));
        fichier.close();
        data = Upp::String(str);
    }
    XmlNode xn = ParseXML(data);
    loopXml(xn,0,"breaks",false);
}
```

function loopXml show me every text in "breaks" tags
