Well, from that example it looks, like you need the SPF_ASYNC flag, which I found described here.

No Set/KillTimeCallback should be necessary for this. Just launch the Speak with the async flag in Start button callback and stop it by Stop button callback, which calls something like Speak("", SPF_PURGEBEFORESPEAK, NULL).

Best regards,
Honza

PS: Just guessing based on the docs, I haven't tried any of this. I actually didn't even touch any windows API for years
