Hi,

I want to add this, because it might help others:

I went back to the 2018.1 stable build, because I had problems with the nightly builds.

With 2018.1 the aforementioned problem occurs frequently to me.

Then I added WaitForSingleObject(hProcess,10000) to Pdb::Stop() as aforementioned.

This did not cure the problem, but did also not cause any additional effects like delays.

Then I did see, the lde project had the flags "GUI" and no other.

So I recompiled Theide with flags "GUI MT", because I believe, it could be multithreaded.

Apparently this cured the problem for me. It did not happen again since 2 hours now.

All the best,

Peter
