Novo wrote on Tue, 11 December 2018 20:09Tried to copy your precompiled app into Application - it won't event launch because it requires macOS 10.14 (can be launched from command line). Tried to copy my recompiled app into Application - menu works, but keyboard (at least command-m) doesn't.

Thanks. Thats weird - info.plist requires 10.13, please check...

I can put about anything to info.plist - if you find the right combination, I will gladly use it. Just be aware that stupid Mac is caching it, so simply changing info.plist is not enough (I really do not know what IS enough, but google search recommends moving .app to another folder in Finder, as stupid as it sounds).
