Subject: Re: SplitterFrame: How to build this?
Posted by imos on Fri, 11 Jan 2019 14:25:42 GMT

Thanks for the explanations, but How to get this GUI skeleton:

Tree | Layout/controls
   |
   |
   |

_____
ArrayCtrl at bottom

using 2 SplitterFrames?

Why does "CtrlLayout" stays in the top of the first SplitterFrame if I did nothing to achieve that
(according to the privided source code)?
Why can not I add first horizontal SplitterFrame to the top of vertical split frame?

Thanks
