Subject: Re: SplitterFrame: How to build this? Posted by imos on Sat, 12 Jan 2019 17:20:20 GMT View Forum Message <> Reply to Message

Great example! Thank you!

It is what I was looking for. Just one more question/detail ;)

Imagine that I want to create multiple widgets during runtime or even just one but a large one, such as:

pctrl.Add(button.SetLabel("Added button!").LeftPos(10, 150).TopPos(100, 1140));

Is it possible to configure "WithContainerLayout<ParentCtrl>" with vertical scroll bar in order to be possible to see the whole button?

Thanks Imos
