Subject: ScatterCtrl: How to control X axis ticks and tags automatically?
Posted by imos on Sat, 12 Jan 2019 18:38:28 GMT

Hi

I am building a line chart using ScatterCtrl and it is done and uses customized X axis tags (time with seconds e.g. 12:00:50). The problem is that I have thousands of values to be represented on the chart and the X Axis tags become a mess (tags overlap one another)...

My question is: Is it possible to configure ScatterCtrl to automatically hide some ticks and tags in order to show only the number of tags that are able to fit the X axis space?

If not, do you have some tips in order to do that by hand?

Thanks a lot

Imos
