mirek wrote on Mon, 14 January 2019 20:53EDIT: Perhaps check the possible fix first - the last post "OK, now I see possible bug, hard to say it is related, but please test:" and do testing only if it fails.

To test:

```
void BufferPainter::FinishPathJob()
if(jobcount == 0)
 return;
/* CoWork co:
co * [&] {
 for(;;) {
 int i = co.Next();
 if(i >= jobcount)
  break:
 CoJob& b = cojob[i];
 b.rasterizer.Reset();
 PathJob j(b.rasterizer, b.width, b.path_info, b.attr, b.preclip, b.regular);
 if(!j.preclipped) {
  b.evenodd = i.evenodd;
  BufferPainter::RenderPathSegments(j.g, b.path_info->path[b.subpath], j.regular ? &b.attr :
NULL, j.tolerance);
 }
 }
};*/
for(int i = 0; i < jobcount; i++) {
 CoJob& b = cojob[i];
 b.rasterizer.Reset();
 PathJob j(b.rasterizer, b.width, b.path_info, b.attr, b.preclip, b.regular);
 if(!i.preclipped) {
 b.evenodd = i.evenodd:
 BufferPainter::RenderPathSegments(j.g, b.path info->path[b.subpath], j.regular ? &b.attr:
NULL, j.tolerance);
 }
}
FinishFillJob();
fillcount = jobcount;
Swap(cofill, cojob); // Swap to keep allocated rasters (instead of pick)
```

(Changing the path rendering to run in ST)

This fixes the issue.

I do not know if this has anything to do with it, but I have noticed that I cannot pass reference variables as parameters to CoWork::Do() -called functions. Compiler does not complain, but the code simply does not work correctly. I have had to switch to using pointers as parameters instead of reference variables in such functions.

BR, Tom
