Hi

I am still trying to compile service samples (in this case the first one) in windows OS both 64 and 32 bit,debug and release and I always get the same result:

----- Service (MAIN GCC WIN32)
Service.rc
Service.cpp
C:\temp\upp\bin/mingw64/32/bin\windres.exe: no resources
Service: 2 file(s) built in (0:02.66), 1332 msecs / file, duration = 2890 msecs, parallelization 20%

There were errors. (0:02.90)

But no errors are shown.
This output is from a 64 bit OS. The output header says MAIN GCC WIN32. IS that right? But if I use theid32.exe I get the same output...

If I compile and run clock example, it works well

How to solve this?
