First iteration commited. Be aware that you need 'new' speller files with .udc extension for this to work, you can download those here:

 https://sourceforge.net/projects/upp/files/SpellerDictionari es/Aspell/

BTW, LevenshteinDistance is both too slow and does not suggest good words (e.g. for "tomrw" I expect to have "tomorrow" as the best choice and LevenshteinDistance does not lead to this), so I had to invent my own algo there... :)
