## Subject: Microsoft Visual C++ workspace

I like upp and theIDE, though I cannot afford to switch the
current dev environment (at least not on permanent basis).

So I started to "convert" some of the projects to Microsoft
Visual C++ workspace (ie. sln and vcproj files).

Attached zip with working setup for several upp libraries
and examples. I had to change several default settings to get
it to link in release (ms linker was crashing otherwise, seems
like a bug in the whole program optimization/link time code
generation).

The project files are done against version upp-win-605 since at
the time latest svn was broken.

Anybody cares to follow up with eclipse version?
