Full - updated preview version,

part1 is here, part2, part3 and any patches are in next/prev post!

Some fixes/addedCode:

- * projects now have separate included/opened files(small add/remove dlg), extensions can be specified in *.tool
- * there is now output window for project which use compilation and clicking on possible file/line error via plugin
- * rtf/qtf bullet reOpen indentation bug fixed thanks to mirek and underlying code

This is preview Ver, but basic things are there, so jet to polish:

- -outputWindowPlugin: ascii only, should use at least wchar_t, mainly not because of no wide regex
- -sorting files in project dialog, for now pri/ses files can be manually edited via editor
- -basic compilation works, CMake and others not checked

InEditor :> (whenWaitingForOutput) is buggy and going fulscreen(with plugins) is buggy because underlying windows are destroyed Editor's richedit still set IsModified somewhere(asks to save even if not modified)

Start completelly afresh, don't just override previous version!
