I do not have Upp setup in a development-environment as such, I download the tar-ball from [https://www.ultimatepp.org/www\\$upweb\\$nightly\\$en-us.html](https://www.ultimatepp.org/www$upweb$nightly$en-us.html) then unpack it, switch to the unpacked-directory and do the make, make install routine

I checked the source and found the code you show in idebar.cpp - exactly as you show it.

Could that libbabel-issue I had, which is related to the debugger have an influence?

I'll anyway do a make clean and recompile everything again - are there anything you suggest I change before I compile?
