I am using Devuan (with openbox as window-manager)

I did make clean, make, make install using the tar-ball for svn 12781 I downloaded a week or so ago.

theide does not show debug info in its logfile: ~/.upp/theide/theide.log
what do I need to do to make it write to the log?

Can you rebuild with theide?

(select ide in uppsrc, build, run...)
