okay just done that and all seem to work as it should:
check-box appears in the menu
code-wordwrap is disabled by default
toggles with menu-select and with alt+w, and wraps when set

What is different when the svn is compiled that makes it not work?
different compiler-flags?
missed includes in the makefile-scripts?
..

I really would like to know... But at least at this point we know there is a problem.

Perhaps you can try with more recent tarball for starters?
