As you can understand from the topic name I have started a standalone VectorDesigner or VetorEditor from the code pieces I found U++... I want to make a ChartCtrl, too.
If you want to join me or just help me, download the file and have a look at it. I made some useful comments in it If you want you can put more comments, and/or improve it, and upload here.

P.S. in the zip is a directory which you can copy to e.g upp/reference
