Hi,

plaise test the package OleAut , it is intended to simplify Ole Automation.
the code for the example above is :

```
StringBuffer stdfile;  
OleObject staad = OleAut::CreateObject("StaadPro.OpenSTAAD");  
staad.Method("GetSTAADFile", stdfile, true);
```

```
int length = staad("geometry")("getbeamlength", x);
```

Note:

i do not have any case when a methode use an output parameter, then it is not tested.
