Xemuth and Omari,

Thanks a lot for very useful information. With these I can manage the current assignment. Also information provided by both opens up avenues of new learning, great!

Still one doubt remaining: CoCreateInstance and GetActiveObject seems to be from 2 different sources: combaseapi.h and oleauto.h. Is it wise to use them interchangeably?

The following link also provides good information, in line with knowledge supplied by xemuth:
<https://www.codeproject.com/Articles/34998/MS-Office-OLE-Automation-Using-C>

Thanks again and regards,
Pradip
