Hey thanks for replay Oblivion !

I successfully did what you do. What i want to do is :

```
void MainMenu(Bar& bar)
{
    bar.Sub("Pause", THISFN(PauseMenu)); // There we can't call another function on click here ?
    bar.Separator();
    bar.Add("Exit", [&]{ tray.Break(); });
}
```

My apologies if i do not explain myself clearly.

Best regards,

Qwak.
