Hello,

I have just installed the alpha version of TheIDE and find following problems:

- The uppsrc, examples, references & tutorials are not visible after installation to the User application directory (/Users/rebaczz/Applications). The problem is that TheIDE is looking in the wrong path (/Users/rebaczz/upp/uppsrc), but the true localization of uppsrc is (/Users/rebaczz/Applications/TheIDE.app/Contents/SharedSupport/uppsrc). After changing the path uppsrc is detected correctly.
- theide package name should be TheIDE (looks better in the application list and launchpad)

Edit: I just remove .upp hidden directory and it seems that it solves the problem with uppsrc path. Sorry for the false alert.

Sincerely,
Klugier
