Subject: No callback on last row deletion
Posted by hojtsy on Tue, 19 Mar 2019 10:08:37 GMT

When deleting rows of an ArrayCtrl by calling ar.Remove(ar.GetCursor()), I usually get a callback on ArrayCtrl::WhenAction. However when the last row is deleted and the ArrayCtrl becomes empty, none of these callbacks seems to be called: WhenAction, WhenArrayAction, WhenCursor. I believe this is a bug, and all of these should have been called, as there are changes to the array, and the cursor as well.
