Hello Koldo,

Quote:Maybe a sample of it could be a kind of new Putty.
Putty is so basic that with any feature you would add, yours would be better. And in U++

Sure. Currently a barebone SSH terminal example (with the upconing Terminal ctrl), and TERM variable set to "xterm") in U++ is 52 lines of code. (Single file, password authentication).

What I have also in my mind is VirtualGui integration. :)

Think about accessing to your server or machine via a terminal running on web browser with SSL, on-demand.

This would be a very cool and (somewhat unique?) feature. And it's high on my TODO list. :)

Best regars,
Oblivion
