I am fighting trying to deploy in Linux, but it is not easy :(:

- Choosing Output Project/Export Mode, a set of files and folders is get. However, running "make" I get this error*** No rule to make target 'plugin/FT_fontsys/config/ftheader.h', needed by '_out/BEMRosetta/BEMRosetta/GCC-Gcc-Gui-Linux-Main-Posix-Shared/main.o'

I cannot see from where "FT_fontsys" comes.

Doing the same with OpenGL package, I get the same error

- I have tried to deploy a .deb. However running it in other computer, it fails because the library version is not the expected:error while loading shared libraries: libpng12.so.0: cannot open shared object file: No such file or directory

Do you have any advice about what to do? :roll:
