Oops, it is the blocker.

Please, see the attached bm file. All SDKs have been set by corresponding versions of MS Visual studio -- I have never set up them separately. I have the following:

```
<DIR>      10.0.14393.0  
<DIR>      10.0.16299.0  
<DIR>      10.0.17134.0  
<DIR>      10.0.17763.0
```

I am not sure my bm file is complete -- I have being trying to build shared version only.
So, it would be nice if U++ could switch between SDKs just pointing out the root SDK's directory.
