Oops, it is the blocker.

Please, see the attached bm file. All SDKs have been set by corresponding versions of MS Visual studio -- I have never set up them separately. I have the following:

<DIR> 10.0.14393.0

<DIR> 10.0.16299.0

<DIR> 10.0.17134.0

<DIR> 10.0.17763.0

I am not sure my bm file is complete -- I have being trying to build shared version only.

So, it would be nice if U++ could switch between SDKs just pointing out the root SDK's directory.

Thanks, this explains it. As we have failed to find any nonambiguos traces of visual studio folders in the registry, we are simply doing the directory scan. You seem to have it installed in non-default folder (not in "microsoft visual studio/2019").
