1. Shared libraries still do not work:

They are not supposed to. That option is just 'experimental'.

I have looked into it and actually managed to make SO work with mingw.

There are caveats: global new/delete overload does not work for some reason, so it defaults back to standard library malloc/free (means no debug checks in debug and performance degradation in release).

But perhaps if one is stuck with mingw, activating SO for debugging might make sense.
