Subject: Re: Potential QTF minor bug or misunderstanding
Posted by cbpporter on Thu, 18 Apr 2019 13:52:27 GMT

Added cleaner example, without some wrong and redundant calculations (yey, found an ancient bug).

And screenshot. The larger you make the margin, the worse it gets: more is cut off.

I have 150% zoom on my desktop, but I'm also using some hacks to turn Win10 zoom into Win8 zoom. That's why screenshots are blurry.

The key to the issue is having the line of text break in two I believe, so that might work without changing zoom.

Edit: the new cleaner example no longer depends on the use of space in QTF, looks like a margin issue.
