Subject: TheIde 608-dev2 crash on linux when mouse-move!

Hey
I have been able to compile from src, in linux, TheIde 608-dev2 with TheIde 605 and the versions debug work well.

The versions that are not debug operate of a form a little rare, when step the mouse over the dialogue to select package main.

At the moment I am going to continue using the version debug (that occupies 25 Mb).

Somebody can explain to what must this?

Nico
