I have tried snapshot of clang 9.0.0 and it actually works!

Interestingly, even those TLS variables are properly optimized (unlike mingw gcc). Linking GUI app now takes 0.2s.

There are some problems with TLS variables in inline code, but fixing those is possible. Also, <float.h> needed a bit of fixing.

The only problem seems to be that clang is 1.5GB beast. I hope it will be possible to prune it a bit...
