---

I'm just curious why ArrayCtrl::Paint is called three times when drawing the control?

Example: I just slightly modified reference/ArrayCtrl.

```
struct MyConvert : public Convert {  
    Value Format(const Value& v) const {  
        ValueArray va = v;  
        RDUMP(va[1]);  
        return String().Cat() << va[0] << " - " << va[1] << " - " << va[2];  
    }  
};
```

The log will contain THREE sets of data.

IMHO, this is a little bit too much from the performance point of view ...
