Subject: ArrayCtrl::Paint is called three times Posted by Novo on Thu, 25 Apr 2019 22:58:06 GMT

I'm just curious why ArrayCtrl::Paint is called three times when drawing the control? Example: I just slightly modified reference/ArrayCtrl. struct MyConvert: public Convert { Value Format(const Value& v) const { ValueArray va = v; RDUMP(va[1]); return String().Cat() << va[0] << " - " << va[1] << " - " << va[2]; } };

The log will contain THREE sets of data.

IMHO, this is a little bit too much from the performance point of view ...
