Hello Community,

I have built Thelde on my raspberry Pi (Have follow this post) and I want to compile one of my code on it.

problem is, since I had only dev C++ on windows (GUI <3), I have no idea of how compile upp project using only command line.

I guess(According to this page) Thelde can be used to build project using Upp framework without having to give a huge gcc command.

If I'm guessing right, can you guys give me a simple example of how build reference/HttpServer ?

Thanks in advance

Have a good day !
